

Ultrasonics

Authorization to Build Tooling from Drawings, CAD Files, Stereolithography, or Other Prototype Parts

Dukane prefers to build and test tooling with actual production parts to assure the application is optimized. From time to time it is requested that Dukane build ultrasonic tooling to customer supplied drawings, CAD files, stereolithography, or other prototype parts. It has been Dukane's experience that actual production parts may differ from the drawings, files, or prototypes, therefore we request a written authorization to build the tooling to your drawing, CAD file, stereolithography, or other prototype part. You should also be aware that some of our tool manufacturing processes will result in the destruction of the prototype parts.

The following information is required:

Customer Company _____

Assembly Name _____

PO Number _____

Drawing Number(s) or Filename(s) _____

Revision Level(s) _____

Approval Date(s) _____

If Prototype, Process Used _____

By my signature I acknowledge that any changes to tooling produced by Dukane as a result of production parts differing from my drawings, files, or prototype parts will be at my company's expense, provided Dukane notifies me or my company in writing and receives authorization from me or my company prior to incorporating such changes.
